Pressure Blower - Vacuum Blower for Pneumatic Conveying System - Flour - Sugar

Pressure Blowers - Vacuum Blowers for Pneumatic Conveying Systems - Flour and Sugar Systems

SPEC offers a full line of pressure, vacuum and aeration blower packages. When integrated with a motor, drive and related components, a positive displacement blower supplies a consistent volume of air and pressure which overcomes system and material losses in order to reliably convey a dry solid in a pressure or vacuum system.

SPEC has provided and installed complete turnkey flour and sugar systems incorporating components from companies like Mac Equipment, Reimelt Corporation, Smoot, Schenck AccuRate, (NBE) National Bulk Equipment, Carman Industries, K-Tron, Great Western, Bray and Shick Tube-Veyor. *Please call us for your pneumatic conveying application.*
