Bottom Diverter Valve - Scale Valve - Hoppertop Valve - Hopper Top Valve - Hopper Fill Valve - Flour - Sugar

Bottom Diverter Valves - Scale Valves - Hoppertop Valves - Hopper Top Valves - Hopper Fill Valves - Flour - Sugar

Bottom Diverter Valves are designed to direct product into a vessel from a pneumatic conveying line. Compressed air is used to actuate the valve into either the divert or through position. In the divert position, conveying air and product are directed into the receiver, where product is separated from the air stream as the air leaves through the exit port. In the through position, product and conveying air by-pass the receiver.

SPEC has provided and installed complete turnkey flour and sugar systems incorporating components from companies like Mac Equipment, Reimelt Corporation, Smoot, Schenck AccuRate, (NBE) National Bulk Equipment, Carman Industries, K-Tron, Great Western, Bray and Shick Tube-Veyor. *Please call us for your pneumatic conveying application.*
