**[Rotary Airlock - Rotary Airlock Feeder - Rotary Valve - Air Lock Feeder Products and Rotary Valve Equipment](#)**

**Rotary Airlocks - Rotary Valves - Rotary Feeders - Airlock Valves for Flour or Sugar**

Rotary Airlocks and Feeders are available in various materials of construction and are uniquely designed for a wide variety of applications. Airlocks are precision machined for close tolerances and are designed for gravity feeding applications, to hold pressure or vacuum in a system, and to meter material into or out of a pressure or vacuum conveying line. Rotary Feeders are used to meter material into pressure or vacuum conveying lines in applications where stack-up height is limited or where conveying air passing through the vanes assists in material discharge.

**SPEC** has provided and installed complete turnkey flour and sugar systems incorporating components from companies like Mac Equipment, Reimelt Corporation, Smoot, Schenck AccuRate, (NBE) National Bulk Equipment, Carman Industries, K-Tron, Great Western, Bray and Shick Tube-Veyor. *Please call us for your pneumatic conveying application.*
